"Identification of a set of genes with developmentally down-regulated expression in the mouse brain...,"

"Identification of a set of genes with developmentally down-regulated expression in the mouse brain...,"

Biochem. Biophys Res. Commun. 185:1155-1161(1992).

-!- FUNCTION: INVOLVED IN THE ACTIVATION CASCADE OF CASPASES

RESPONSIBLE FOR APOPTOSIS EXECUTION. MIGHT FUNCTION BY EITHER ACTIVATING SOME PROTESIS EXECUTION. MAIGHT FUNCTION BY EITHER ACTIVATING SOME PROTESIS.

-!- SUBUNIT: HETERODIMER OF A SWALL AND A LARGE SUBUNIT (BY SIMILARITY).

-!- SUBUNIT: HETERODIMER OF A SWALL INTESTINE, AND HAIR FOLLICLES OF SIMILARITY).

CONS. LIVER, LUNG, KIDNEY, SWALLI INTESTINE, AND HAIR FOLLICLES OF VIBRISSAE. MODERATE EXPRESSION SEEN IN THE EMBRYONIC CONS. LIVER, LUNG, KIDNEY GLAND AND THYMUS. IN THE ADULT, IT IS HIGHLY EXPRESSED IN SPLEEN, LUNG AND KIDNEY. MODERATELY IN THE BRAIN, HEART, TESTIS, LIVER, LOW LEVELS IN THE THYMUS, SKELETAL.

CONTROL OF PROCRAMMED CELL DEATH SUCH AS CENTRAL NERVOUS SYSTEM AND CONTROL OF PROCRAMMED CELL DEATH SUCH AS CENTRAL NERVOUS SYSTEM AND
                                                                                                                                                                                                                                                                                                                                                                                 PTM: THE MATURE PROTEASE CAN PROCESS ITS OWN PROPEPTIDE, BUT NOT THAT OF OTHER CASPASES (BY SIMILARITY). SIMILARITY: BELONGS TO PEPTIDASE FAMILY C14.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 SIMILARITY).

Submitted (JUN-1996) to the EMBL/GenBank/DDBJ databases.

FUNCTION: INVOLVED IN THE ACTIVATION CASCADE OF CASPASES

RESPONSIBLE FOR APOPTOSIS EXECUTION. AT THE ONSET OF APOPTOSIS IT PROTEOLYTICALLY CLEAVES POLY(ADP-RIBOSE) POLYMERASE (PARP) AT A 216-ASP-JGLY-21D BOND. CLEAVES AND ACTIVATES STEROL REGULATORY ELEMENT BINDING PROTEINS (SREBPS) BETWEEN THE BASIC HELIX-LOOPHELIX LEUCINE ZIPPER DOMAIN AND THE MEMBRANB ATTACHMENT DOMAIN.

CLEAVES AND ACTIVATES CASPASE-6, -7 AND -9 (BY SIMILARITY).

-1. SUBUNIT: HETERODIMER OF A 17 KDa (P17) AND A 12 KDa (P12) SUBUNIT
                                                                                                                                                                                                                                                                                                                                                         SUBCELLUTAR LOCATION: Cytoplasmic.
TISSUE SPECIFICITY: EXPRESSED IN HEART, BRAIN, LIVER, AND MUSCLE BUT NOT IN KIDNEY OR TESTIS.
BEVELOPMENTAL STAGE: HIGHLY EXPRESSED IN NEURON-ENRICHED REGIONS OF THE DEVELOPING BRAIN, BUT DOWN-REGULATED TO LOW LEVELS IN THE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       PIN: CLEAVAGE BY GRANZYME B, CASPASE-6, -8 AND -10 GENERATES THE TWO ACTIVE SUBUNITS. ADDITIONAL PROCESSING OF THE PROPEPTIDES IS LIKELY DUE TO THE AUTOCATALYTIC ACTIVITY OF THE ACTIVATED PROTEASE. ACTIVE HETERODIMERS BETWEEN THE SMALL SUBUNIT OF CASPASE-7 PROTEASE AND THE LARGE SUBUNIT OF CASPASE-7 PROTEASE AND THE LARGE SUBLINIT OF CASPASE ASO OCCUR AND VICE VERSA (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Length 277;

Note=Act8 as a negative regulator of poptosis;
ISSUE SPECIFICITY: EXPRESSED IN LARGEP AMOUNTS IN THE EMBRYONIC
LUNG, LIVER AND RIDNEY THAN IN THE HEAR. AND BRAIN. IN THE AULTS
HIGHER LEVEL EXPRESSION IS SEEN IN THE PLACENTA, LUNG, KIDNEY,
PANCREAS THAN IN THE HEART, BRAIN, LIVER AND SKELETAL MISCLE.
PTM: THE MATURE PROTEASE CAN PROCESS ITS OWN PROPEPTIDE, BUT NOT
    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ADE OF CASPASES

-! FUNCTION: ACTS AS A CYSTEINE PROTEASE.

CELL DEATH BY PROTEOLYTICALLY ACTIVATING. "R INACTIVATING A SUBSTRATE MAY BE CED-4.

ALTERNATIVELY IT MIGHT DIRECTLY CAUSE CELL DEATH BY PROTEOLYTICALLY CERVING THAT A RECRUCIAL FOR CELL VIABILITY (BY SIMILARITY).

-! SUBUNIT: COULD BE A HETBRODIMER OF TWO "BUNITS DERIVED FROM THE PRECURSOR SEQUENCE BY A PROBABLE AUTOCA:..LYTIC MECHANISM.

-! STMILARITY: BELONGS TO PEPTIDASE FAMILY C14.

-! SIMILARITY: CC.'LAINE 1 CARD domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Eukaryota; Metazoa; Nematoda; Chromadorea; Rhabditida; Rhabditoidea;

Li FUNCTION: Most upstream protease of the activation cascade of caspases responsible for the TNRSF6/FAS mediated and TNRSF1A induced cell death. Binding to the adap:er molecule FADD recruits it to either receptor. The resulting as:regate called death-inducing signaling complex (DISC) perf me CASPB proteolytic activation. The active dimeric enzyme is then liberated from the DISC and free to activate downstream apoptotic proteases.

Proteolytic fragments of the N-terminal propeptide (termed CAPB), CASPS and CAPB) are likely retained in the DISC. Cleaves and activates CASP3, CASP4, CASP6, CASP7, CASP9 and CASP10. May participate in the GADB apoptotic pathways. Cleaves ADPRT. Hydrolyzes the small-molecule substrate. Ac-Asp-Glu-val-AMC. Likely target for the cowpox virus CRMA death inhibitory protein.

LINEALY ERGULATION: Inhibited by Z-VAD-FK, Crma and PSS. CLEAVES ADMITT. Heterodimer of a 18 kDa (P18) and a 10 kDa (P10) subunit. TISSUB SPECIFICITY: Expressed in a wide variety of tissues.

LINEALS ESPECIFICITY: Expressed in a wide variety of tissues.

Lipsub SPECIFICITY: Expressed in a wide variety of tissues.

Lipsub SPECIFICITY: Expressed in a wide variety of tissues.

Lower expression in heart, brain, testis and skeletal muscle.

Liber Parker SPECIFICITY: brain, testis and skeletal muscle.

GZMB and CASP10 can be involved in these processing events (By similarity).

SIMILARITY: BELONGS TO PEPPIDASE FAMILY C14.

                                                                                                                                                                                                                                                  FUNCTION: Most upstream protease of the activation cascade of caspages responsible for the TNRRSF6/RAS mediated and TNFRSF1A induced cell death. Binding to the adapte. molecule FADD recruits it to either receptor. The resulting aggr. ate called death. inducing signaling complex (DISC) performs CASPB proteolytic activation. The active dimeric enzyme is then liberared from the DISC and free to activate downstream apoptotic proteases. Proteolytic fragments of the N-terminal propeptide (termed CAP3, activates CASP3, CASP6, CASP6, CASP7, "ASP9 and CASP10. May participate in the GZBB apoptotic pat. s. Cleaves ADPRT. Hydrolyzes the small-molecule substrat AC-ABP-GULVAI-ABC.
                                                                                                                                                                                                                                                                                                                                                                                                                                  Likely target for the cowpox virus CRN leath inhibitory protein.

Isoforms 5, 6, 7 and 8 lack the cataly site and may interfere with the pro-apoptotic activity of the complex.

SUBINIT: Heterodimer of a 18 kba (P18) and a 10 kba (P10) subunit. Interacts with FADD and CFLAR. Isoform ? interacts at the
            X-RAY CRYSTALLOGRAPHY (2.8 ANGSTROMS).

PTM: CLEAVAGES BY GRANZYME B OR CASPASE-10 GENERATE THE TWO ACTIVE SUBUNITS. PROPERTIDE DOMAINS CAN ALSO BE CLEAVED EFFICIENTLY BY CAP32 PROTEASE. ACTIVE HETERODIMERS BETWEEN THE SMALL SUBUNIT OF CASPASE-7 AND THE LARGE SUBUNIT OF CPP32 PROTEASE ALSO OCCUR AND VICE VERSA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 VIYGKOGVTPIKDLTAMFRGDRCKTLLEKPKLFFIQACRGT

LENOTION: INVOLVED IN THE ACTIVATION CASCADE OF CASPASES
RESPONSIBLE FOR APOPTOSIS EXECUTION. BINDING OF CASPASES
RESPONSIBLE FOR APOPTOSIS EXECUTION. BINDING OF CASPASE AND
ACTIVATES CASPASE-3. PROTEOLYTICALLY CLEAVES POLY (ADP-RIBOSE)
POLYMERASE (PARP).
C. PUNCTION: Isoform 2 lacks activity is an dominant-negative inhibitor of caspase-9.
C. SUBUNIT: Heterodimer of a 35 kDa (P35) and a 10 kDa (P10) subunit.
Caspase-9 and APAFI bind to each other via their respective NH2-
terminal CED-3 homologus domains in the presence of cytochrome C
and APP. Interacts with BIRC?.

Isold=P55211-2; Sequence=VSP_003818;
ISSUE SPECIFICITY: UBIQUITCUS; WITH HIGHEST EXPRESSION IN THE HEART, MODERATE EXPRESSION IN LIVER, SKELETAL MUSCLE, AND PANCREAS. LOW LEVELS IN ALL OTHER TISSUES.
PTM: CLARANGES AT ASP-315 BY GRANZYME B AND AT ASP-330 BY CPP32 GENERATE THE TWO ACTIVE SUBUNITS. CASPASE-8 AND -10 CAN ALSO BE INVOLVED IN THESE PROCESSING EVENTS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    TAS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    GO; GO:0004211; F:caspase-9 activity; TAS.

DEVELOPMENTAL STAGE: PRESENT UNIFORMLY THROUGHOUT EMBRYOS OF STAGES 4 AND 10. IN STAGE 16 EMBRYOS, THE EXPRESSION BECOMES RESTRICTED TO THE CENTRAL NERVOUS SYSTEM, THE DEVELOPING GONADS, AND A PORTION OF THE GUT. IN STAGE 17 EMBRYOS, EXPRESSION IS MAINLY LOCALIZED IN CELLS ALONG THE MIDLINE OF THE CENTRAL NERVOUS SYSTEM.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    IROIDEPEZIO-3; SEQUENCE-VSP 000806;
TISSUE SPECIFICITY: HIGHLY EXPRESSED IN LUNG, SKELETAL MUSCLE,
LIVER, KIDNEY, SPLEEN AND HEART, AND MCDCRATELY IN TESTIS. NO
EXPRESSION IN THE BRAIN.
PTM: CLEAVAGES BY GRANZYME B OR CASPASE-10 GENERATE THE TWO ACTIVE
SUBUNITS. PROPERTIDE DOMAINS CAN ALSO BE CLEAVED EFFICIENTLY BY
CPP32 PROTEASE. ACTIVE HETERODIMERS BETWEEN THE SMALL SUBUNIT OF
CASPASE-7 AND THE LARGE SUBUNIT OF CPP32 PROTEASE ALSO OCCUR AND
VICE VERSA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               SIMILARITY: BELONGS TO PEPTIDASE FAMILY C14.
CAUTION: WHAT WE CALL ALPHA' ISOFORM IS KNOWN IN REF.4 AS BETA,
BUT AS BETA IS ALREADY DEFINED IN REF.3 WE HAVE CALLED IT ALPHA'.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        human and mouse cDNA sequences.";

RESPONSIBLE FOR APOPTOSIS EXECUTION. CLEAVES AND ACTIVATES STEROL REGULATORY ELEMENT BINDING PROTEINS (SREBPS). OVEREXPRESSION CONTEST PROCAPAMED CELL DEATH (BY SIMILARITY).

SUBUNIT: HETERODIMER OF A 20 kDa (P20) AND A 11 kDa (P11) SUBUNIT.

SUBUNIT: HETERODIMER OF A 20 kDa (P20) AND A 11 kDa (P11) SUBUNIT.

SUBUNIT: HETERODIMER OF A 20 kDa (P20) AND A 11 kDa (P11) SUBUNIT.

SUBUNITS: LOW LECELS, MISPLES SELETAL MUSCLE, AND TESTIS. NO EXPRESSION IN THE BRAIN.

C. I. PTM: CLEAVAGES BY GRANZYME B OR CASPASE-10 GENERALE THE TWO ACTIVE CP932 PROTEASE. ACTIVE HETERODIMERS BETWEEN THE SMALL SUBUNIT OF CASPASE-7 AND THE LARGE SUBUNIT OF CASPASE-7 AND THE LARGE SUBUNIT OF CASPASE-7 AND SIMILARITY).

C. OLD SUBUNITS: PROPERTIED DOMAINS CAN ALSO BE CLEAVED EFFICIENTLY BY CHARLE SUBUNIT OF CASPASE-7 AND THE LARGE SUBUNIT OF CASPASE-7 AND SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This SWISS-PROT entry is copyright. --- DISEASE: Defects in CASP10 are the cause of type II autoimmune lymphoproliferative syndrome (ALPS2) [MIM:603909]. ALPS2 is characterized by abnormal lymphocyte and dendritic cell homeostasis and immune regularory defects.
--- SIMILARITY: BELONGS TO PEPTIDASE FAMILY C14.
--- SIMILARITY: CONTAINS 2 death effector (DED) domains.

SIGNAL 134 BRASSINOSTEROID IRR RECEPTOR KINASE.
CHAIN.
SUBCELLULAR LOCATION: Type I membrane protein; plasma membrane. MISCELLANEOUS: A 68 amino acid island between the 20th and the 21th LRR is essential for the binding of brassinosteroids (By
                                                      MISCELLANGOUS: BRII is almost identical to SR160, a systemin receptor identified in Lycopersicon peruvianum. Competition experiments indicate that brassinosteroid and systemin are probably perceived by different regions of the receptor. SIMILARITY: BELONGS TO THE SER/THR FAMILY OF PROTEIN KINASES. SIMILARITY: Contains 24 leucine-rich (LRR) repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       N-LINKED (GLCNAC. . .)                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            -!- MISCELLANEOUS: SR160 is almost identical to BRII, a brassinosteroid receptor identified in Lycopersicon esculentum. Competition experiments indicate that brassinosteroid and systemin are probably perceived by different regions of the receptor.
-!- SIMILARITY: BELONGS TO THE SER/THR FAMILY OF PROTEIN KINASES.
-!- SIMILARITY: Contains 24 leucine-rich (LRR) repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       15-SEP-2003 (Rel. 42, Created)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       FUNCTION: THE GLYCINE CLEAVAGE SYSTEM CATALYZES THE DEGRADATION OF GLYCINE. THE H PROTEIN SHUTTLES THE METHYLAMING GROUP OF GLYCINE FROM THE P PROTEIN TO THE T PROTEIN (BY SIMILARITY).

COFACTOR: THE H CHAIN CONTAINS A COVALENTLY-BOUND LIPOYL COFACTOR (BY SIMILARITY).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        SUBUNIT: The glycine cleavage system is composed of four proteins: P, T, L, and H (By similarity).
SIMILARITY: Belongs to the govH family.
SIMILARITY: Contains 1 lipoyl-binding domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Cole S.T., Eiglmeier K., Parkhill J., James K.D., Thomson N.R., Wheeler P.R., Honore N., Garnier T., Churcher C., Harris D., Mungall K., Basham D., Brown D., Chillingworth T., Connor R., Holroyd S., Horneby T., Jagels K., Lacroix C., Maclean J., Homlin N., Murphy L., Oliver K., Quail M.A., Rajandream M.A., Rutherford J.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                FUNCTION: DEFINES DORSAL-VENTRAL DOMAINS IN DEVELOPING BRAIN. MAY PLAY A ROLE IN DEFINING POSITIONAL INFORMATION ALONG THE ANTERIOR-POSITERIOR (A/P) AXIS AND THE DORSAL-VENTRAL (D/V) AXIS OF THE DEVELOPING NERVOUS SYSTEM. MAY RE INVOLVED IN DETERMINING POSITIONAL OR BOUNDARY INFORMATION RATHER THAN DETERMINING A GIVEN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CELL TYPE.

SUBCELLULAR LOCATION: Nuclear (Probable).

SUBCELLULAR LOCATION: Nuclear (Probable).

SUBCELLULAR LOCATION: Nuclear (Probable).

DEVELOPMENTAL STAGE: IS FIRST DETECTABLE. THE NEURAL PLATE STAGE
STAGE 19. LEVELS GRADUALLY INCREASE DUI.. NG LATER NEURALA STAGES,

AND BECOMES FAIRLY CONSTANT THROUGHOUT TAILBUD AND HATCHING STAGES
BEFORE DECLINING AT LATE SWIMMING TADPOLE STAGES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                   CATALYTIC ACTIVITY: N-substituted aminoacyl-tRNA + H(2)0 = N-substituted amino acid + tRNA.
SUBUNIT: Monomer (By similarity)
SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
SIMILARITY: Belongs to the PTH family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sukaryota, Metazoa, Chordata, Craniata, Vertebrata, Buteleostomi,

"Cloning and sequencing of Pseudomonas genes determining sodium dodecy! sulfate biodegradation.";
Gene 114:19-24(1992)
-:- FUNCTION: ACTIVATES THE TRANSCRIPTION OF THE SDSA GENE FOR SODIUM DODECYL SULFATE (SDS) DEGRADATION.
-:- SIMILARITY: BELONGS TO THE LYSR FAMILY OF TRANSCRIPTIONAL.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               .,
